

The JCSG Core IV Suite

For initial screening using an optimized set of conditions

The JCSG Core IV Suite provides:

- Conditions giving the highest hit rates at the Joint Center for Structural Genomics
- Optimized suites based on over half a million crystallization trials
- Maximized reproducibility through online access to production reports

The JCSG Core Suites — split into four screens of 96 unique conditions — are the result of analyzing over 500,000 high-throughput crystallization experiments performed at the JCSG (1).

The 384 crystallization conditions that provided the highest hit rates in initial screening were chosen to form the screens.
